web version MARCH2022

Flexible plastic cages that are made from polyethylene material especially suited for the dynamic loads of sea are considered a well proven concept for extreme conditions.

Extensive use of strong and high quality polyethylene material in cage brackets eliminates corrosion, minimize expensive and difficult maintenance, and substantially increases cage lifespan compared to steel brackets. This is especial important in areas with high salinity, warm water tempetarue, and high energy offshore farm sites where with high UV radiation from the sun.

Asakua is a supplier who is delivering offshore fish farming systems with plastic cages as turnkey projects. We use our own injection brackets which are ranging 250 to 450mm designed and manufacturing in Asakua factory.

Cage teams of Asakua are experienced figures thanks to the international projects rrealized in the past12 years and recent days.
